Smart Impulse celebrates 10 years of collaboration with ENGIE, driving innovation and impact in the energy transition

Paris, March 4, 2025 – Smart Impulse is pleased to announce the renewal of its technological partnership with ENGIE, marking a decade of successful collaboration dedicated to improving building energy efficiency. Since the first framework agreement in 2014, this alliance has led to over 700 projects across 17 countries, optimising energy consumption in schools, offices, hospitals, and more.

A Decade of Innovation and Lasting Impact

ENGIE has chosen Smart Impulse to provide cutting-edge energy solutions. Smart Impulse has developed a unique technology, using an innovative meter and AI-based algorithms to identify energy consumption by zone and by end-use (lighting, IT, heating, etc.). This precise visibility helps target energy savings and ensure long-term efficiency

Over the past 10 years, ENGIE has established itself as a key player in the global energy transition, demonstrating its ability to combine innovation, lasting impact, and excellence to serve its clients.

At the same time, Smart Impulse has undergone a remarkable transformation. From a promising startup, it has become the global leader in non-intrusive electricity consumption measurement. Today, over 4,000 sites covering 35 million square meters are equipped with Smart Impulse solutions, and the company operates in 60 countries worldwide.

This achievement highlights Smart Impulse's ability to meet the growing needs of building managers in terms of energy performance and consumption management.

"This partnership is a great source of pride for Smart Impulse. Over the past 10 years, we have built a relationship based on mutual trust, outstanding economic results, and exceptional energy performance. Its longevity reflects the quality of our collaboration and the alignment of our goals. We are excited to continue this partnership, which is transforming our industry," said Charles Gourio, CEO of Smart Impulse.

An Ambitious Vision for the Future

Smart Impulse is entering a new decade of collaboration with ENGIE, developing cutting-edge technological solutions to address the growing challenges of building energy transition, particularly in electrification and energy use flexibility. This ambition aligns with increasingly stringent regulations and enhanced energy management system requirements.

About Smart Impulse – [smart-impulse.com](https://www.smart-impulse.com)

Founded in 2011, Smart Impulse is the global leader in non-intrusive metering technologies for electrical consumption. Its mission is to help building managers better understand their electricity usage to optimise consumption, through easy-to-implement solutions. On average, these solutions enable 15% energy savings without any renovation work, offering a return on investment in less than a year. With over 4,000 equipped buildings, covering approximately 35 million sqm and a presence in 60 countries, Smart Impulse is a key player in building energy efficiency.
